# Git & Github

---

## What is Git?

Git is a popular version control system. It was created by Linus Torvalds in 2005, and has been maintained by Junio Hamano since then.

## Git Uses:

- Tracking code changes
- Tracking who made changes
- Coding collaboration

## Functionalities of Git:

Manage projects with **Repositories**

**Clone** a project to work on a local copy

Control and track changes with **Staging** and **Committing**

**Branch** and **Merge** to allow for work on different parts and versions of a project

**Pull** the latest version of the project to a local copy

**Push** local updates to the main project

# Git & Github

---

## Git Advantages:

- Snapshots
- Distributed
- Integrity
- Fast Operations
- Branch Handling
- Robust

# Git & Github

---

## Git Hub:

GitHub is a cloud-based platform where you can store, share, and work together with others to write code.

It uses Git software, providing the distributed version control of Git plus access control, bug tracking, software feature requests, task management, continuous integration, and wikis for every project
